Data Overview (cont'd)

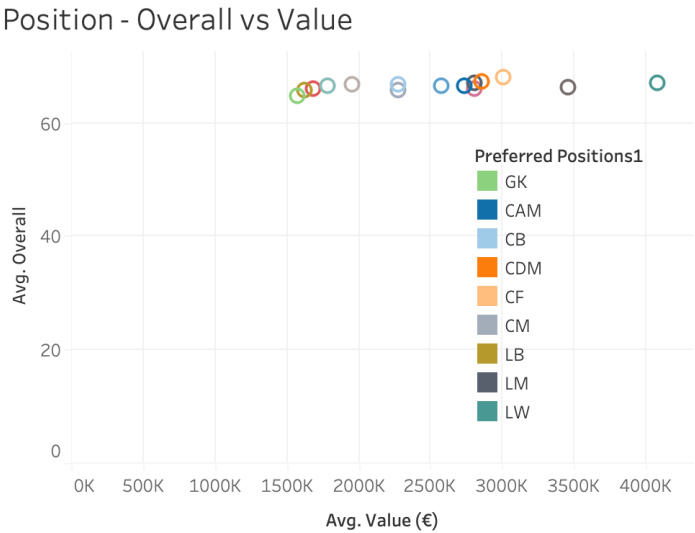

Wage-Value Relationship:
- Cluster plot visualizing the correlation between player wage and value.

Four Distinct Clusters:
- Green Cluster: 15,076 players (61.16%)
- Yellow Cluster: 2,429 players (9.87%)
- Red Cluster: 412 players (1.67%)
- Blue Cluster: 64 players (0.26%)

Overall-Value Relationship:
- Chart depicting the average value vs. average overall for each player position.

Noticable Findings:
- All positions appear close in average overall rating.
- Significant value difference (~2.5 m) between the highest position, LW and the lowest GK

Attackers

Definition of Attackers:

- Include players with preferred positions of LW, RW, CF, and ST.

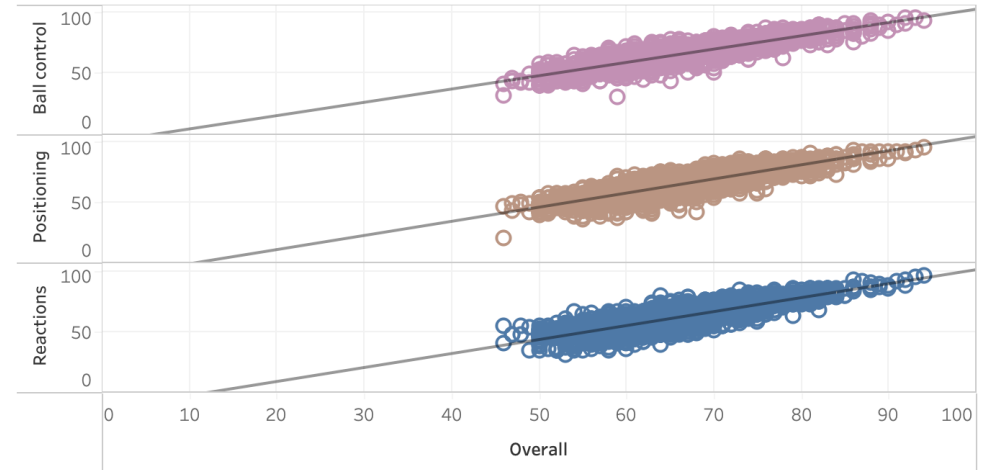

Key Attributes and R-Squared:

- The three primary attributes with the highest R-squared to Overall rating: Ball Control, Position, and Reactions.

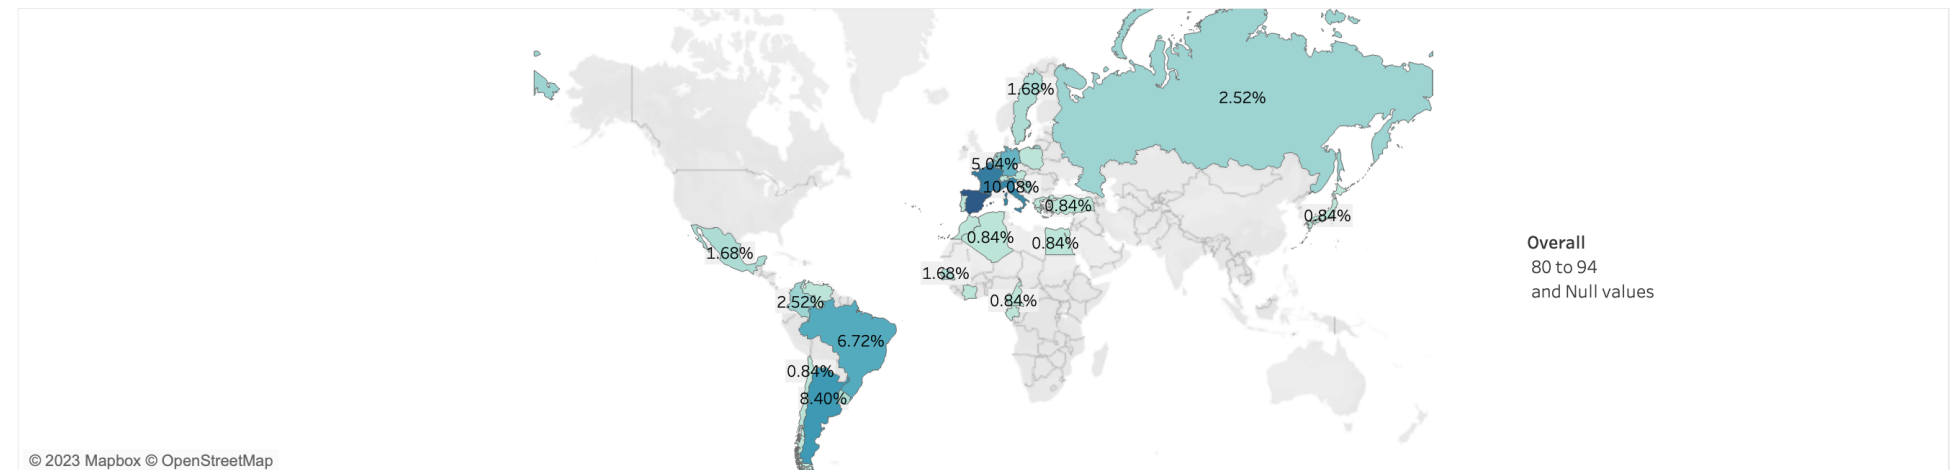

Surprising Omissions:

- Attackers are commonly associated with attributes such as speed and finishing, both had low R-Squared

----------	-------------------	-----------	-------------	-----------	-------------

Midfielders

Definition of Attackers:

- Include players with preferred positions of RM, LM, CAM, CM and CDM

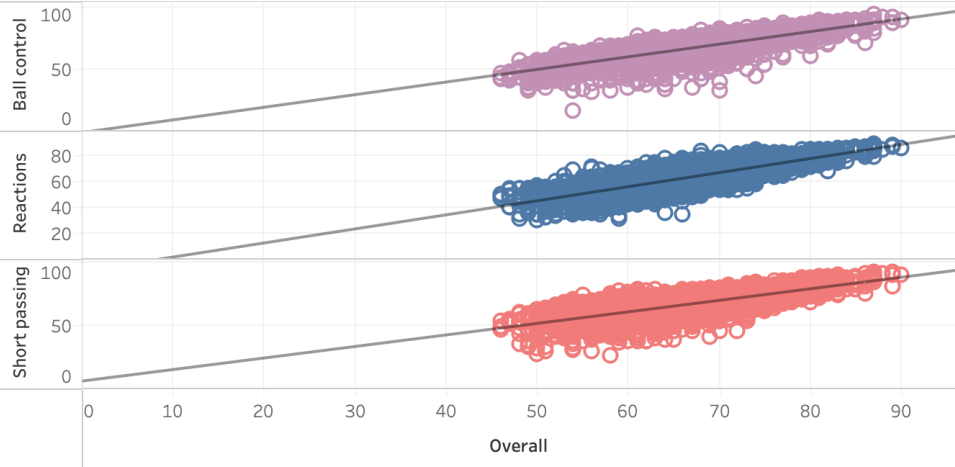

Key Attributes and R-Squared:

- The three primary attributes with the highest R-squared to Overall rating: Ball Control, Reactions and Short passing.
- Same 2 attributes from attackers

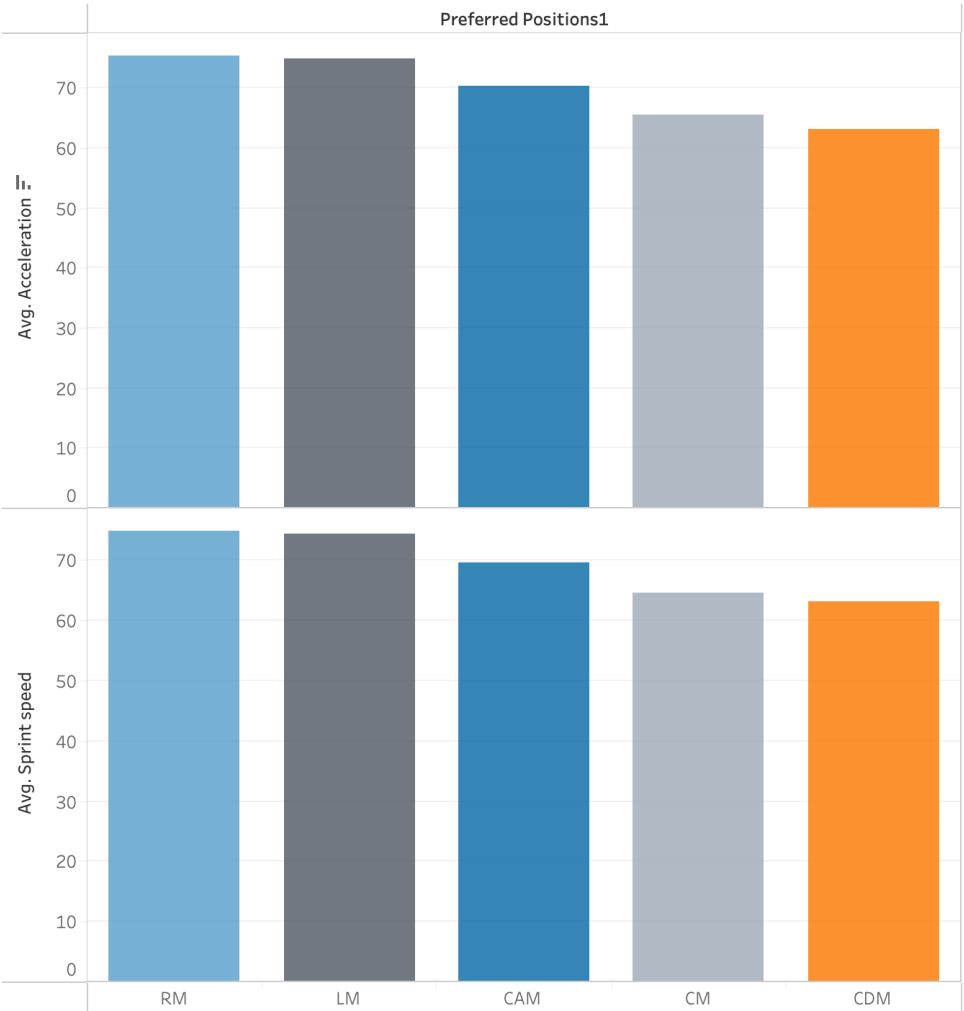

Midfield Pace Comparison:

- LM and RM are fastest, understandable since they on the wings

Mid Attributes

Defenders

Definition of Attackers:

- Include players with preferred positions of RM, LW, CAM, CM and CDM

Key Attributes and R-Squared:

- The three primary attributes with the highest R-squared to Overall rating: Interceptions, Marking and Reactions.
--> Reaction is also here

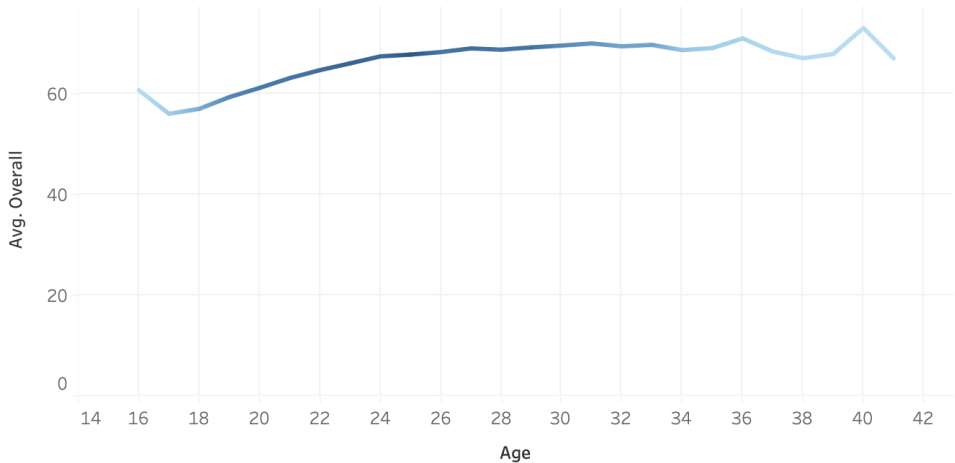

Contrasting Attributes:

- Note the counterintuitive findings: Strength and Speed, commonly sought by FIFA players, have low R-squared.

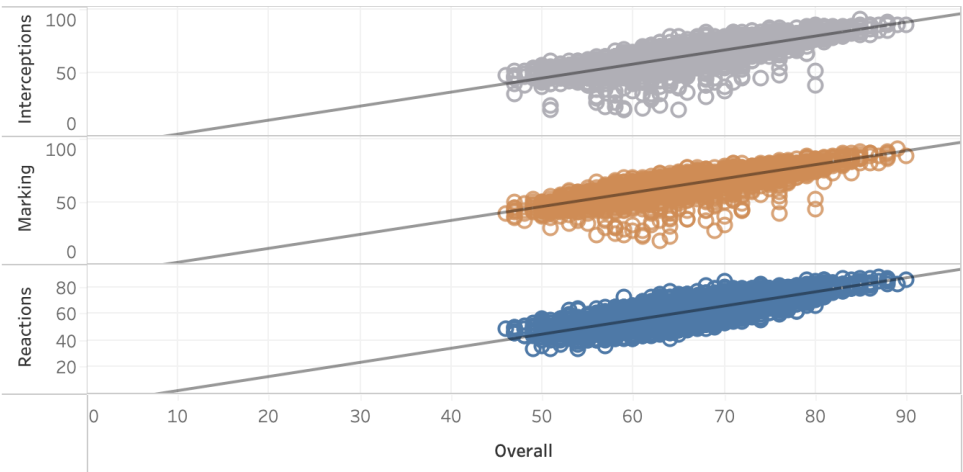

Age Perception Challenge:

-Challenges the common belief that defenders typically improve with age compared to other positions

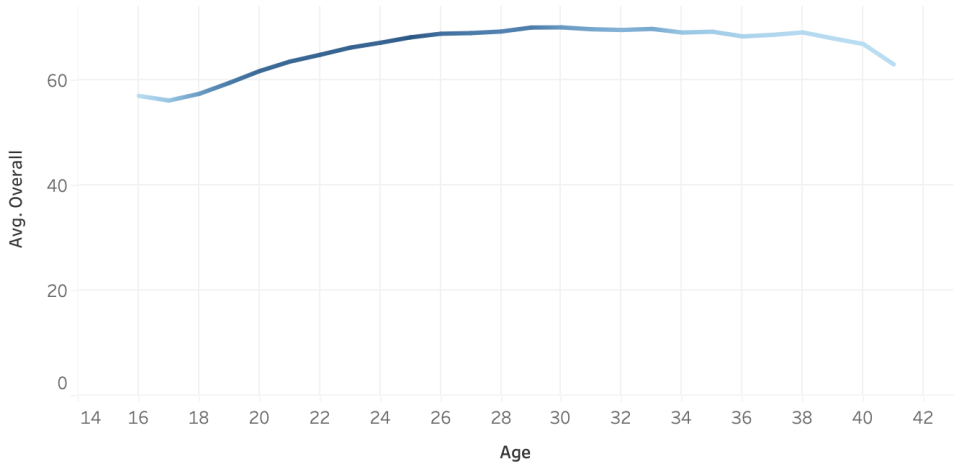

Defenders Overall VS Age

GoalKeepers

GK Nationalities

Goalkeeper Key Attributes:

- The three crucial attributes with the highest R-squared for goalkeepers: are Diving, Positioning, and Reflexes.
- Makes sense as keepers have different qualities than outfield players.

Geographical Distribution:

- Map highlights high-rated goalkeepers, are mostly European even compared to South America
- Lack of GK development worldwide
